

**BASEBALL HAS THE UTILITY INFIELDER.
INDUSTRY HAS THE PLIERS.**

Regardless of the industry, pliers, clamps, cutters and snips get reached for often. Proto®'s line is broad, featuring a wide range of general and specific-use tools. It's tough, too, forged from high quality alloy steel that's heat-treated. Most of our pliers are fitted with cushioned, slip-resistant handles.

And we build in features to reduce effort on your part. For example, our Electrostatic Discharge (ESD) pliers are a unique, dual-leaf spring design that automatically opens the jaws when you relax your grip.

Our pliers fit the task, cover the gamut and make work easier. That's utility.

Curved Jaw Locking Pliers

PROTO

PROTO® LOCKING PLIERS

Designed by engineers who look at each problem with fresh eyes, no matter how simple, each Proto® tool brings quality, durability and accuracy to the job site.

High corrosion resistant finish with welding spatter resistance.

Large diameter rivets to provide secure joints adding to the durability and robustness of the tools.

Locking mechanism helps leave both hands free when clamping, helping to eliminate squeezing action and general hand fatigue when manipulating.

Drop forged jaws and rugged tooth profile for durability and toughness.

Holes in mobile jaw are drilled, not press punched to ensure cylindrical shape and maximum bearing with rivets.

Spring-loaded release lever is out of the way when handling.

Tip of release lever projects at end of handle for a quick, no-pinch, powerful release especially when tools are firmly locked.

SAFETY WIRE PLIERS

Safety wire is a type of positive locking device that prevents fasteners from loosening due to vibration and other forces. The presence of safety wiring also serves to indicate that the fasteners have been properly tightened.

Safety wire is available in a variety of gauges and materials, depending on the application. In aircraft and racing applications, stainless steel wire is used, most commonly in .032" diameter. Typically, the wire is threaded through a hole drilled into a fastener or part, then twisted and anchored to a second fastener or part, then twisted again.

SLIP-JOINT PLIERS
