Quick Set Die Heads

The RIDGID® Quick Set die heads eliminate the need for repeated verification of cut depth when changing pipe sizes during fabrication. The units operate with a system of 4 stops on a size bar; each stop can be adjusted and set independently, allowing the operator to change sizes quickly and accurately. The Quick Set die heads can be used with the RIDGID 1215, 300 Compact, 535, and 1822 Threading machines as well as the 300 Power Drive.

Quick Set Die Head Benefits

- **Saves Time** – By enabling quick size changes, the Quick Set die heads make crews more productive.
- **Ample Range** – The Quick Set die heads allow threading pipe sizes $\frac{1}{8}$ " – 2".
- **Uses Conventional Dies** – The Quick Set die heads use universal dies, so there is no need to inventory extra parts.
- **Fits Most RIDGID Equipment** – The Quick Set die heads fit the Models 1215, 535, 1822, and 300 Compact Threading Machine as well as the 300 Power Drive.
